

Report 1 arm

6/29/2026

Report overview

!During this project batch we actually managed to get it to work!!!! how we did this was by taking a new Shield for our pwm driver and it actually worked this time I believe the old ones I had were faulty and this actually fixed it I also tested the joysticks against each other got

working tests and it came back successful this is a major step in the right direction and soon we will be on our way to a fully working machine and then optimizing the design.

Why?

Soon we will actually be able to subject to different loads of different points and see what different things can do and actually start our research paper on the inverse kinematics of a Servo arm

future

next step at a good gripper and a good wrist rotation as well as making new base plates
